DETAILED ACTION

Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over CN87108003 in view of Gallacher (US 5,023,016) and El A'mma (US 6,211,213).

CN teaches a universal fuel composition for internal combustion engines, especially gasoline and diesel. The fuel composition comprises 0.1-3% peroxides, 0.05-0.1% sulfonates and fusel oil. CN discloses that the peroxides are organic peroxides. See abstract in its entirety. CN teaches the limitations of the claims other than the differences that are discussed below.

In the first aspect, CN differs from the claims in that it does not specifically teach that the sulfonates are lithium aromatic sulfonates. However, the general teaching of sulfonates encompass the claimed compound and Gallacher teaches that the generic

class of sulfonates includes alkali metal salts (lithium) of didodecyl benzenesulfonic acid (see col.4, lines 30-57).

It would have been obvious to one of ordinary skill in the art to have prepared the fuel additive with lithium aromatic sulfonate because CN especially desires sulfonates and Gallacher teaches that alkali metals salts, such as lithium didodecyl benzene sulfonic acid is within the scope of the sulfonates of CN.

In the second aspect, CN differs from the claims in that it does not specifically teach that the peroxides of CN are t-butyl perbenzoate and 2-butanone. However, El A'mma teaches that the organic peroxides of CN are equivalent to those of the present invention (see col. 3, lines 37-51; col. 5, lines 11-14, and 33-34)

It would have been obvious to one of ordinary skill in the art to have selected the claimed peroxides because El A'mma teaches that they are art recognized equivalent of the disclosed peroxides of CN.

In the third aspect, CN differs from the claims in that it does not teach that the solvent is diphenyl. However, no unobviousness is seen in the use of the solvent because its duty is merely to maintain the additives in solution for addition to the fuel. See MPEP 2144.03.
